

# Real Time Energy Management and Optimization Systems

CIBO Focus Group: Improving Energy Efficiency  
June 9, 2009

Oscar Santollani  
Managing Partner, Soteica LLC  
Houston, TX  
Ph.: 281-829-3322; email: oscar.santollani@soteica.com

## Overview

- History, References, Publications
- What is a Real Time Energy Management and Optimization System (RTEMOS)?
- Energy Watchdog: Case Studies
- Where would RTEMOS bring value in Ken's tiered EM Model?
- A Real Life, Real Time Demo: Rohm & Haas
- RTEMOS for District Energy?
- Conclusions

## Soteica LLC Technologies

- **Energy Management and Optimization Systems**
- Advanced Control Projects
  - Over a dozen DMC implementations
- Other Industrial Software Solutions (Production Accounting, Scheduling and Operations Management)

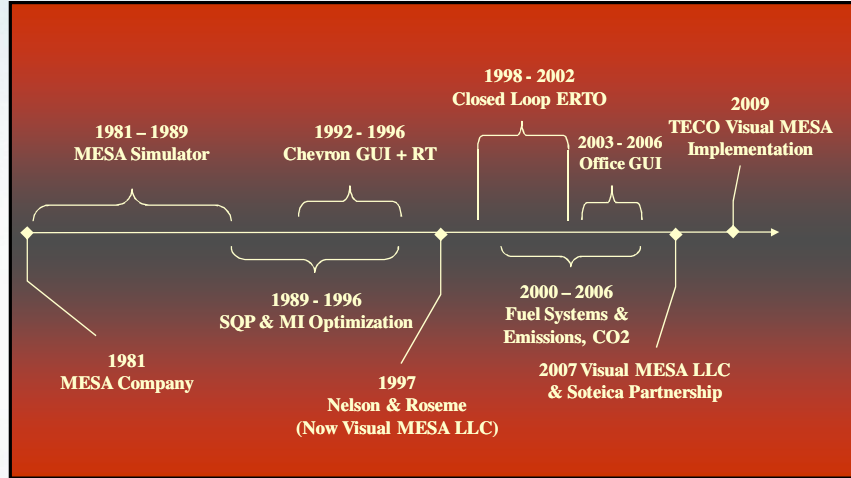

## Soteica Milestones

- **Founded in 1985.** Specialized in process modeling and industrial IT implementations
- **Early 2000's:** Soteica deploys Visual MESA projects as implementation partner. Implements more than 20 sites (refineries and petrochemicals)
- **2006:** Purchased 50% equity in 3<sup>rd</sup> product, Visual MESA (for Energy Management and Optimization)
- **2008:** Rohm & Haas KPI project
- **2009:** Visual MESA implementation at Thermal Energy Corporation (TECO) in the Texas Medical Center (in progress)

# Development Timeline

# Installations

# of Sites	Company	Cogen	GHG
4	Chevron Texaco	X	
2	Chevron Phillips	X	
1	BP		
1	Eastman	X	
4	Shell/Equilon/Motiva		
1	Air Liquide	X	
2	ConocoPhillips	X	X
11	Large Refiner	X	
1	Rohm & Haas		X
1	Cytec		
1	Irving Oil		
1	INEOS		
2	Sunoco	X	X
7	Repsol YPF	X	X
1	Total	X	X
1	Interquisa	X	X
1	ENAP		X
1	Lotos	X	X
In Development	Thermal Energy Corporation	X	X

# Technical Publications

- A Highly Successful Holistic Approach to a Plant-Wide Energy Management System by Fendt, **Rohm and Haas Co.** Steam Digest 2001
- Energy Real Time Optimization, Uzturk, Franklin, Righi, van Mechelen and Georgiou, **ExxonMobil**. 2006 NPRA Q&A and Technology Forum
- Finding Benefits by Modeling and Optimizing Steam and Power Systems, Reid, Harper and Hayes, **Air Liquide Large Industries U.S. LP.** 2008 Industrial Energy Technology Conference
- Energy Real-Time Optimizer Baytown Refining/Chemical Complex by Maurie Lorenz, **ExxonMobil**. 2009 Industrial Energy Technology Conference
- Many more on our Downloads area of our website

# What is a Real Time Energy Management and Optimization System

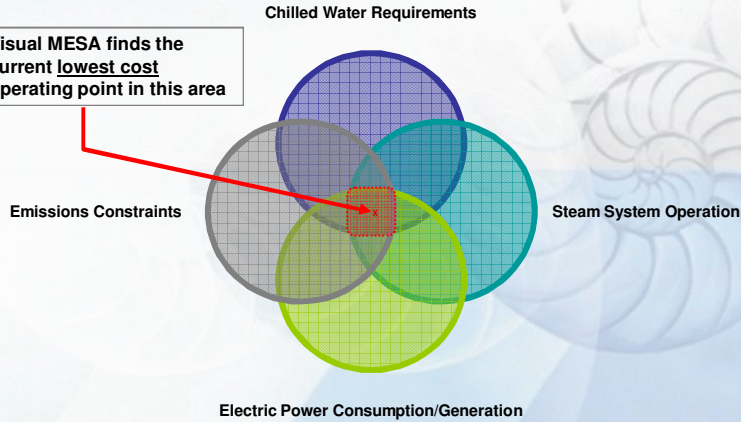

- Online, Real time, Site-wide Optimization of all Utilities (chilled water, cogen, steam, GHG emissions, fuel, ...)
  - Recommending lowest cost operation to meet current customer demand
  - Including rigorous and detailed cogen models
- Consideration of physical, environmental, contractual, and reliability constraints
- Ensuring recommendations to operations that are safe, accurate, and directly actionable
  - Discrete directions to operators
- Sustainable energy management for lowest operational cost over time

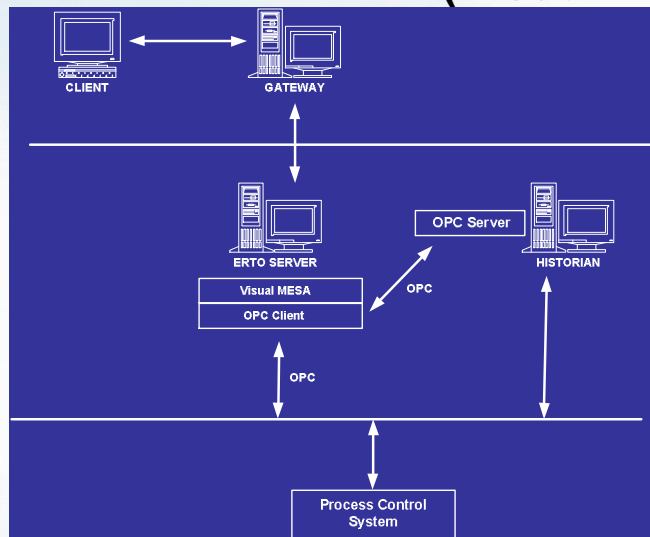

# Delivering the Value

Continuous Energy Management for the Real Time, Site-wide Optimum

Visual MESA finds the current lowest cost operating point in this area

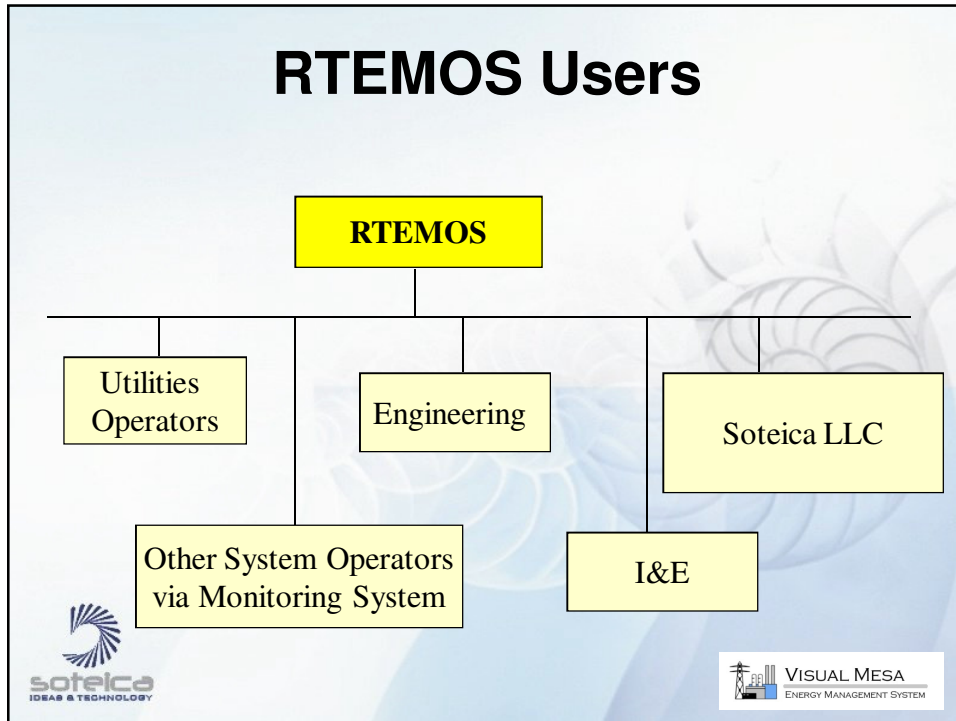

# System Architecture (Visual Mesa)

"Energy System Real Time Optimization", Derya Uztürk, H. Franklin, J. Righi, X. van Mechelen, A. Georgiou. NPRA Conference. Oct 8 – 11, 2006, Phoenix, AZ (USA).

# RTEMOS Users

## RTEMOS based KPIs Calculation Procedure

- RTEMOS runs every 15 minutes taking and validating real time data from Plant Historian: InSQL, IP21,PI, PHD, etc.
- RTEMOS simulates and finds the optimum cost for the whole site, as well as calculates the KPIs.
- It then writes back the optimum values, KPIs, etc. to Plant Historian, from where they can be retrieved using an Excel spreadsheet, Client tools of Process Historian, etc.

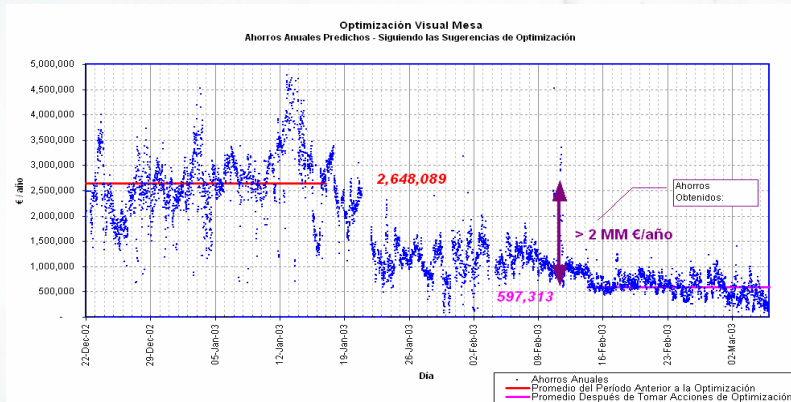

## RTEMOS Main Uses

- Monitoring, KPIs
- Auditing and Accounting
- “What-If?” Case Studies
- Optimization

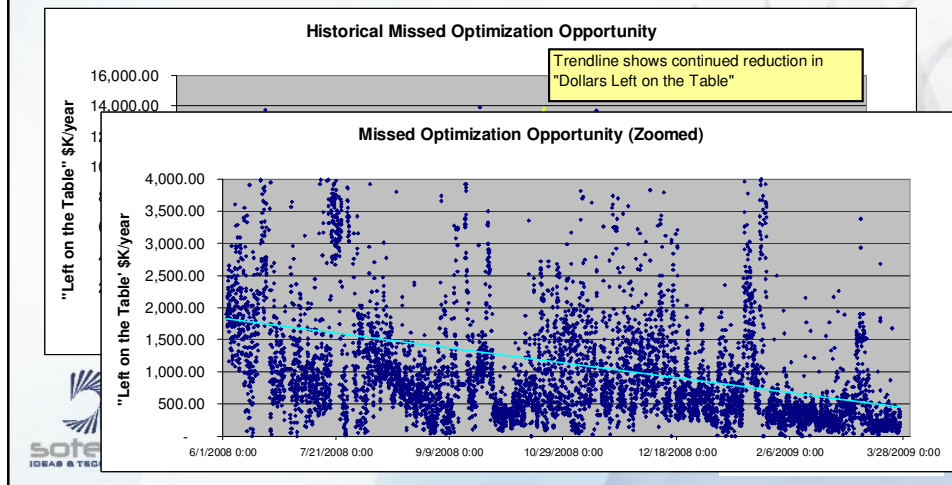

## Visual MESA as “Energy Watchdog”: A Case Study from Refining

- Result: > 2 MM \$/year in documented savings

# Visual MESA as Energy Watchdog: Example from Industrial Gas

Sustained benefit for Air Liquide with renewed focus on energy

## Extending the Benefit

- Immediate efficiency gain by having a “Watchdog” on the system
- Modeling of “time-of-day” power cost, “take-or-pay” requirements, and other contract complexities
- Energy KPI calculation engine (data and calculation validation)
- Continuously vetted model for off-line “what if?” engineering studies
  - Future expansion
  - Operational adjustments for maintenance outages

## Where would RTEMOS bring value in Ken's Tiered EM Model?

- **Tier 0 ? ;-)**
  - Information gathering.
  - Updating P&IDs
  - Putting it all in one single “file”: the model!
- **Tier 1: A low to no capital project approach**
  - An RTEMOS is always NO Capital.
  - It helps prioritize where additional instrumentation is needed
  - It is doing the energy balance between the supply and demand

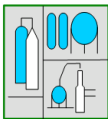

## Where would RTEMOS bring value in Ken's Tiered EM Model?

- **Tier 2: Higher capital requirement projects...**
  - You now have a validated model of the sitewide utilities which becomes your objective check against which to run all your proposed projects
- **Tier 3: Operating Discipline approach to EM**
  - An RTEMOS is your Energy Watchdog, keeping everyone focused on minimizing energy cost.
  - It also becomes your Energy KPI calculation engine
- **Tier 4: Long Term “Strategic Intent” with EM**
  - Once you have a validated model in place you can now “push the envelope”. Example: Rohm & Haas’ “Production Planning for Energy”

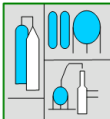

# Visual MESA R&H Model

**THE PLANT**  
Rohm and Haas Visual MESA Model  
Model version: 18b

STEAM

FUEL

**Costs**

Electricity (\$/kW)  
Natural Gas (\$/mmBTU)  
Exhaust Water (\$/MLB)  
600# Incremental Cost (\$/MLB)

**Economic Summary**

Simulation cost (\$/hr)  
Global Optimum Cost (\$/hr)  
Delta Cost (\$/hr)  
Solution Code

**Electric Model**

**KPI Calculations**

Plant MVA  
Ambient Temperature

2. GOOD SOLUTION: SOP STOP DUE TO FRACTIONAL CHANGE IN OBJECTIVE FN

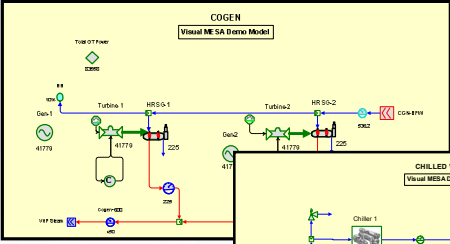

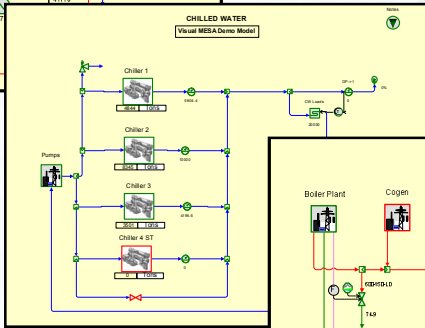

# District Energy

(work in progress)

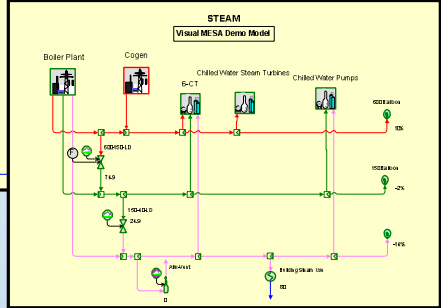

**COGEN**  
Visual MESA Demo Model

**CHILLED WATER**  
Visual MESA Demo Model

**STEAM**  
Visual MESA Demo Model

## Why RTEMOS for District Energy?

- **Core:** Utilities are the “business” of District Energy suppliers
- **Experience:** Long history of well-developed and rigorous thermodynamic modeling
- **Flexibility:** Necessary modeling “ingredients” already exist for application to District Energy
  - No major modifications required to software to include chiller optimization
- **Focus:** “Supply-side” improvement
  - Demand-side projects (efficient lighting, improved insulation, etc.) have likely been addressed already
- **Sustainability:** Model easily modified to accommodate upgrades to system as customer needs change

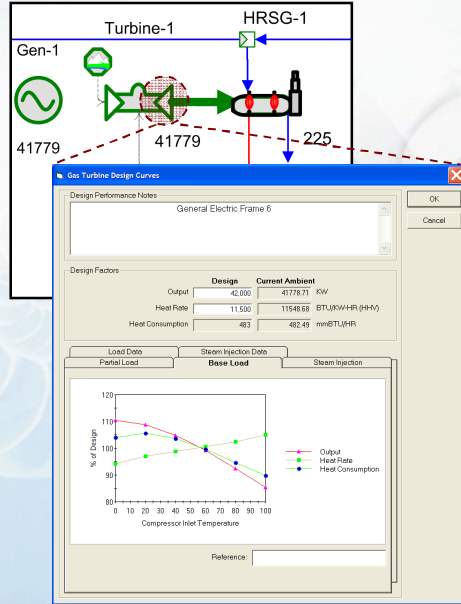

## Visual MESA Contributions

- Cogen Modeling and Optimization
- Modeling of Greenhouse Gas Emissions
- Modeling of Alternate Fuels

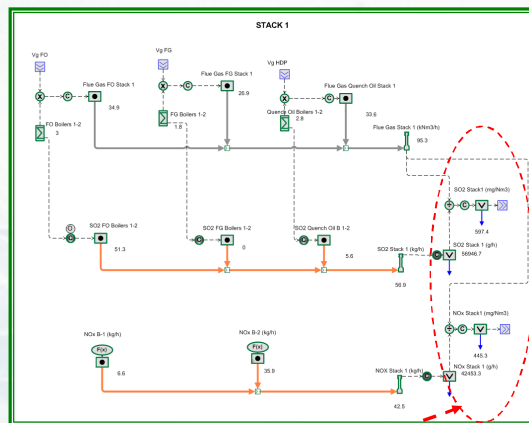

# Cogen

- Detailed Gas Turbine and HRSG modeling
  - Correlations to Ambient Temperature
  - GT-specific
- Power generation optimization based upon current market price
- Boiler/HRSG duct firing tradeoff

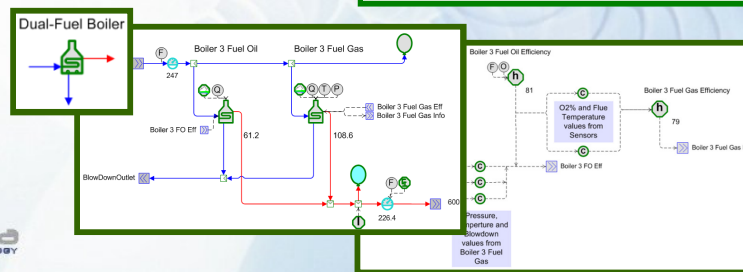

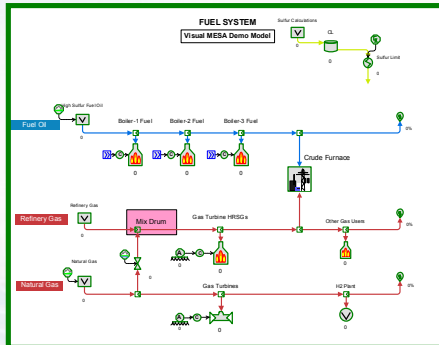

# GHG Emissions

- Tracks emissions from Boilers and other sources
  - CO<sub>2</sub>
  - NO<sub>x</sub>
  - SO<sub>x</sub>
  - Sulfur
- Limits Optimization by Site Emission Limits
- Example shown includes SO<sub>2</sub> and NO<sub>x</sub> mass and concentration

## Alternate Fuels

- Boilers and other equipment using
  - Off Gas
  - Fuel Oil
  - Coal
  - Other
- Dual Fuel Boilers

## Conclusions

- RTEMOS is a mature technology.
- It helps operations to run at minimum energy cost 24x7x365.
- It ensures that everyone is working with the same information. It's constantly validated model becomes the common checking point for all energy project evaluations.
- It is the foundation of your Energy KPI program.

Thank you for your time!
